

iRx Installation

The iRx android app is not yet registered with Google Play. Therefore, you can't install it the normal way that Google Play apps are installed.

You can download the iRx app from <https://nwosu.net/irx/irx.apk>.

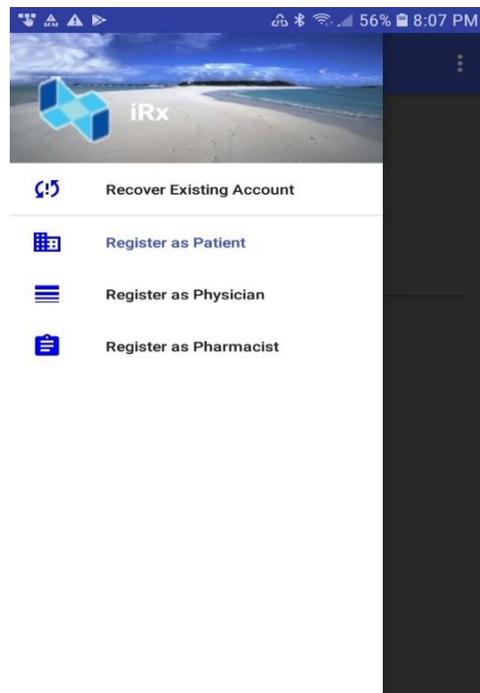

After downloading the app, go to your download folder and open it to install. You may get a warning asking you to allow the app to install. You may be asked to modify your phone settings to be able to install it. In that case, do the following:

1. Go to the Settings
2. Tap the "Security" option.
3. Scroll down and check (or enable) box next to "Unknown Sources".

Now, you can go back and install the app.

iRx User Guide

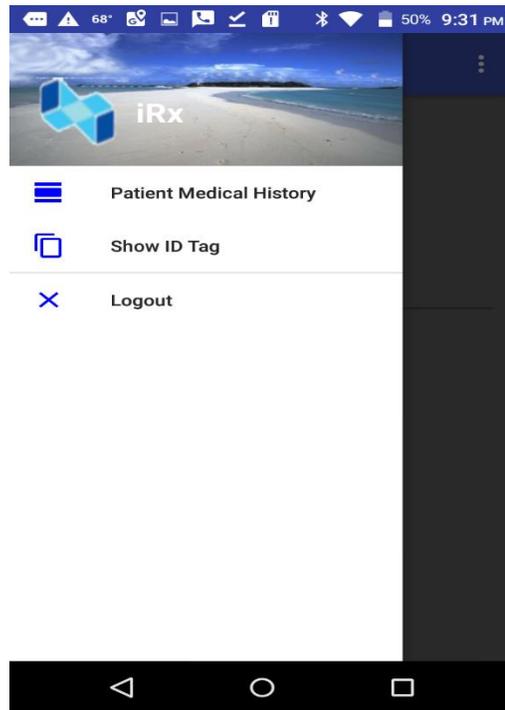

After installing the iRx mobile app, you can register as a Patient, Physician, or Pharmacist. If you were previously registered, you can also Recover Existing Account – see below.

Select the applicable option.

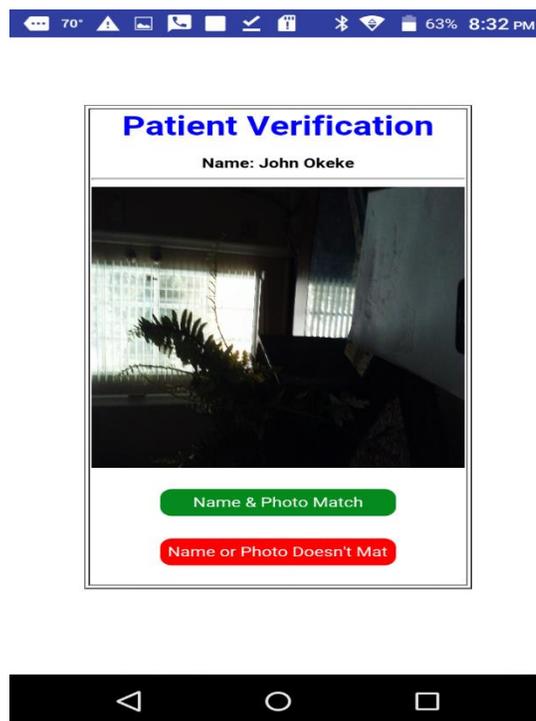

As a Physician

If you registered as a physician, you'll be able to access Patient Medical Records and be verified by the Patients:

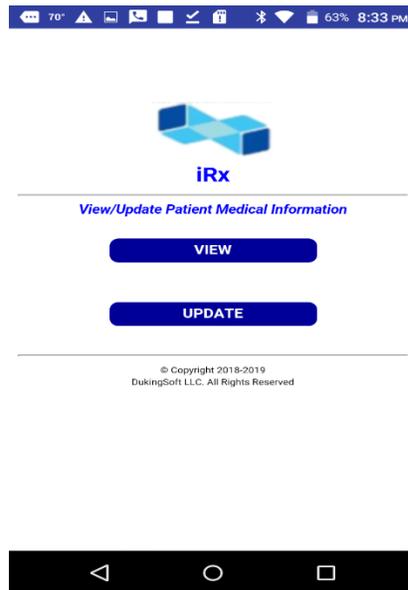

To access a patient's medical record, select **"Patient Medical History"**. Then ask the patient to show his/her iRx Tag. When the Tag is displayed on the patient's phone, then follow the instructions on the screen above.

If the scanning was successful, a Patient Verification screen is displayed for you to verify the name and photo of the patient. Select the applicable button – **"Name and Photo Match"** or **"Name or Photo Doesn't Match"**.

On the next screen below, select “**View**” to view the patient’s medical record or select “**Update**” to modify the medical record.

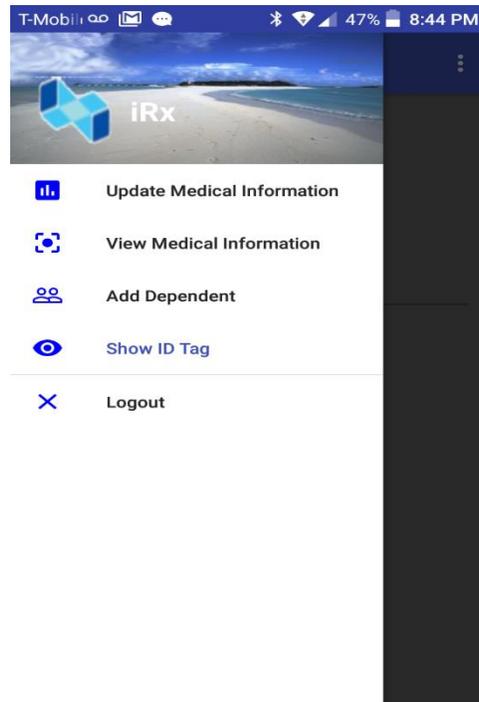

In Cases of Medical Emergency

During medical emergencies when the patient is incapable of authorizing the physician, the physician will request to “View Medical Information” and will enter his/her password and select “BYPASS”. On the physician’s device, he/she will touch the “Show ID Tag” and use the patient’s device to scan the physician’s Tag. If successful, the physician will be authorized to view the patient’s medical information during medical emergencies.

As a Patient

As a patient, you can “**Update Medical Information**”, “**View Medical Information**”, “**Add Dependent**”, or “**Show ID Tag**”.

Create/Update Medical

To create or update medical information, select “**Update Medical Information**”. You’ll be required to enter your app password. On the next screen, you may need to select the patient from the list of patients – the photo images of the patients are displayed. Create or update the medical record and save.

View Medical Record.

To view current medical records, select “**View Medical Record**”. Enter the app password. If necessary, select the patient from the list. The medical record is displayed.

Add Family Members or Dependents

To add family members or dependents, select “**Add Dependent**”. Enter the app password, fill in the form, and save.

Authorizing Physician or Pharmacist

To authorize a Physician or Pharmacist to view or update medical information, select the “**Show ID Tag**” option. Enter the app password. If necessary, select the patient and touch the associated QR Code. Then allow the Physician or Pharmacist to scan the QR Code.
